## **Mosquito-control application scheduled in Beaumont Tuesday**

Due to recent public complaints about mosquito bites and an increase in the number of mosquitos trapped in the Beaumont area during routine surveillance, Riverside County will apply an ultra-low volume of a material designed to reduce adult mosquito populations in two separate areas of the city.

The Riverside County Vector Control Program's planned treatment by a truck-mounted sprayer is intended to reduce the population of mosquitos, which transmit West Nile virus and various other illnesses. One treatment area is south of Palmer Avenue and runs several hundred feet on either side of Morris Street, extending to the northwestern edge of a nearby golf course. The other area runs several hundred feet west of Veile Avenue, north about 100 feet from W. First Street and south to about Westward Avenue.

Application of the EPA-approved mosquito control product Zenivex (EPA Reg No 2724-807) is scheduled for Tuesday (8/30) from 7 p.m. to 9 p.m., when mosquitos are most active. Zenivex is registered by the Environmental Protection Agency (EPA) for controlling mosquitos and protecting public health. This product is applied according to label instructions by trained and certified technicians.

Although the product poses very little to no risk for people, some may prefer to avoid exposure. Residents who wish to minimize exposure to themselves and pets should remain indoors and keep windows closed during ground application and for 15 minutes afterward. The amount of material sprayed is three ounces per acre, which ensures that humans, animals and crops are safe. Signs will be posted Friday along the routes informing residents about the control efforts.

In addition, vector-control staff are intensifying mosquito surveillance, searching out breeding sites and conducting larval control where appropriate.

Follow these precautions to safeguard your family:

- Protect against mosquito bites by using insect repellent. Use a repellent with DEET (N, N-diethyl-m-toluamide), picaridin (KBR 3023), oil of lemon eucalyptus [p-methane 3, 8-diol (PMD)] or IR3535 according to the instructions on the product label. DEET products should not be used on infants under two months of age and should be used in concentrations of 30 percent or less on older children. Lemon eucalyptus oil should not be used on children under three years of age.
- Be aware of peak mosquito hours. Dawn and dusk are peak biting times for many mosquitos. Consider rescheduling outdoor activities during that time. Report any day biting mosquitos to vector staff, stressing that you are being bitten during the day vs at dawn or dusk.
- Clothing can help reduce mosquito bites. Wear long-sleeves, long pants, and socks when outdoors to help keep mosquitos away from skin.
- Mosquito-proof your home. Drain standing water because mosquitos lay their eggs in standing water. Limit the number of places for mosquitos to breed by draining/discarding items that hold water. Check rain gutters and drains. Empty unused flowerpots and wading pools. Change water in birdbaths and pet bowls at least weekly.
- Keep mosquitos outside by having tightly fitting screens on all windows and doors.

Please call the vector control office at 951-766-9454 if you have any questions, would like to report a mosquito problem in your area or to request fish that eat mosquito larvae.
