Deaths due to Pneumonia and Influenza: During week 3, 6.6% of deaths were due, in part, to pneumonia or influenza. Compared to historical data, this is above normal limits.

School Absenteeism: During week 3, 15.9% of students at sentinel school sites were absent due to illness. Compared to historical data, this is above normal limits.

State Influenza Activity: During week 2*, overall influenza activity was “widespread” in California. Based on available data from 80 enrolled sentinel providers, the percentage of visits for ILI in week 2* (3.8%) exceeds the epidemic threshold (3.7%) for this time of year. Three influenza-associated deaths in adults less than 65 years of age were reported during Week 2*. Fifteen laboratory-confirmed influenza outbreaks were reported.

National Influenza Activity: During week 2*, influenza activity continued at elevated levels in the United States. The proportion of outpatient visits for influenza-like illness (ILI) was 4.5%, which is above the national baseline of 2.0%. All 10 regions reported ILI at or above region-specific baseline levels. Puerto Rico and 23 states experienced high ILI activity; New York City and 10 states experienced moderate ILI activity; 10 states experienced low ILI activity; seven states experienced minimal ILI activity; and the District of Columbia and one state had insufficient data. The geographic spread of influenza in 44 states was reported as widespread; Guam, Puerto Rico, the U.S. Virgin Islands and five states reported regional activity; and the District of Columbia and one state reported local activity. During week 2*, 9.3% of all deaths reported through the 122-Cities Mortality Reporting System were due to P&I. This percentage was above the epidemic threshold of 7.1% for week 2*. Eleven influenza-associated pediatric deaths were reported.
