High concentrations of pedestrian and bicycle fatalities occur in areas of high poverty and among individuals with lower levels of education across Riverside County.

In Riverside County, there were 388 pedestrian/bicyclist fatalities from 2010-2016. The majority happened in the evening between the hours of 8 pm-10pm.

Of all pedestrian/bicyclist fatalities, 11.6% of fatalities occurred between the ages of 0-19.

Individuals with lower levels of education have the highest pedestrian and bicycle fatalities.

Pedestrian/bicyclist collisions are over-represented by low-income populations. These are preventable and reversible inequities. To advance health equity, strategies need to be developed and implemented to address conditions that create traffic safety inequities. (Aboelata, Yanez, & Kharrazi, Vision Zero 2017)
