Influenza Season 2013/2014 – Riverside County, California
Influenza Surveillance Weekly Update
Week ending March 22, 2014

Deaths due to Pneumonia and Influenza: During week 12, 6.8% of deaths were due, in part, to pneumonia or influenza. Compared to historical data, this is below normal limits.

School Absenteeism: No data available.

State Influenza Activity: During week 11*, overall influenza activity was "local" in California. Based on available data from 67 out of an average of 130 enrolled sentinel providers, the percentage of visits for ILI in week 11 (2.2%) was within expected baseline levels for this time of year. Ten influenza-associated deaths in adults less than 65 years of age were reported during Week 11. Five influenza outbreaks were reported, no novel influenza cases have been detected in California to date.

National Influenza Activity: During week 11*, influenza activity continued to decrease in the United States. The proportion of outpatient visits for influenza-like illness (ILI) was 1.7%, which is below the national baseline of 2.0%. Four of 10 regions reported ILI at or above region-specific baseline levels. One state experienced moderate ILI activity; two states and New York City experienced low ILI activity; 47 states experienced minimal ILI activity and the District of Columbia had insufficient data. The geographic spread of influenza in four states was reported as widespread; nine states reported regional influenza activity; the District of Columbia and 19 states reported local influenza activity; Puerto Rico, Guam and 18 states reported sporadic influenza activity, and the U.S. Virgin Islands reported no influenza activity. During week 11, 7.1% of all deaths reported through the 122-Cities Mortality Reporting System were due to P&I. This percentage was below the epidemic threshold of 7.4 % for week 11. Seven influenza-associated pediatric deaths were reported.
