During week 7, 8.2% of visits to Riverside County emergency departments were related to influenza-like illnesses. Compared to historical data, this is within normal limits.

During week 7, 16.0% of visits to physician sentinel sites were related to influenza-like illnesses. Compared to historical data, this is above normal limits.

Deaths due to Pneumonia and Influenza: During week 7, 10.2% of deaths were due, in part, to pneumonia or influenza. Compared to historical data, this is within normal limits.

School Absenteeism: During week 7, 10.6% of students at sentinel school sites were absent due to illness. Compared to historical data, this is within normal limits.

State Influenza Activity: During week 6*, overall influenza activity in California remained "widespread". Increases in laboratory detections of influenza and influenza-associated outbreaks were reported in multiple regions statewide. Based on available data, the percentage of visits for ILI in week 6 (4.1%) fell below the epidemic threshold (4.6%). This was based upon only available data and may change once their remaining providers report. Eight influenza-associated deaths in persons less than 65 years of age were reported during week 6. No novel influenza cases have been detected in California to date.

National Influenza Activity: During week 6*, influenza activity remained elevated in the United States, but decreased in most areas. The proportion of outpatient visits for influenza-like illness (ILI) was 3.2%. This is above the national baseline of 2.2%. All 10 regions reported ILI above region-specific baseline levels. Thirty-one states reported widespread influenza activity; Puerto Rico and 14 states reported regional influenza activity; the District of Columbia and 4 states reported local influenza activity; Guam and one state reported sporadic influenza activity, and the U.S. Virgin Islands did not report. A cumulative rate for the season of 32.1 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported. Of reported hospitalizations, more than 50% were among adults 65 years and older. During week 6, 9.1% of all deaths reported through the 122 Cities Mortality Reporting System were due to P&I. This percentage was above the epidemic threshold of 7.5% for week 6.
